Available immediately; flexible for April–August 2027 cohort start

SUMMARY

AI product builder with a B.CompSci (AI & Big Data). Led a team of 5 students through a 10-month multi-agent LLM platform build with weekly sponsor reviews, led 10+ team projects, and ran consumer growth campaigns. Top scorer in QuantInsti EPAT Batch 68. Looking to build AI products people actually need.

PRODUCT MANAGEMENT & LEADERSHIP EXPERIENCE

AI Product Lead & Research Intern, University of Wollongong *Jan – Oct 2025*

- Owned vision, roadmap, and PRDs for a multi-agent AI platform that helps developers go from a plain-language request to working code; led a 5-student team through Agile sprints across a 10-month project.
- Ran two stakeholder meetings per week with the faculty sponsor and managed delivery day to day, reducing manual operational work by an estimated 30%.
- Directed the design and AI-assisted development of cross-model communication between Gemini and OpenAI models, coordinating the team to deliver multi-agent workflows that automated 5+ end-to-end processes.
- Presented a live demo of the prototype at a university tech expo attended by 200+ students; received technical review feedback from the sponsor.

Product Strategy & Marketing Intern, Kratos Energy, Wollongong *Oct – Dec 2024*

- Used user and market data to target consumer prospects and run cold-lead campaigns, lifting qualified leads by 25%.

Cyber Security Intern, Work Ventures, Sydney *Oct – Dec 2023*

- Learned common attack methods and helped run a simulated attack on employees to test their compliance with company security rules.

Team Lead, University Group Projects, University of Wollongong *2022 – 2025*

- Led teams of 4–5 on 10+ subject and group projects, owning planning, task allocation, and final presentations.

Member, UOW Quant Club *2023 – 2025*

- Drove outreach for the SIG UNSW Algothon, promoting the Sydney tournament to students and signing peers up to compete.

PROJECTS

Multi-Agent AI Platform & Code Generation System *FastAPI · React/TypeScript · Python*

- Led the AI-assisted build of a prototype where agents running on local and cloud LLMs (Gemini, OpenAI) collaborate to generate code from a plain-language request, with a FastAPI backend, a React/TypeScript UI, and automated GitHub commits.
- Demoed it at the university tech expo, then paused development because it didn't show enough traction to justify continuing, a lesson in validating user need before building further.

Options Volatility Smile Trading Strategy *Python · NumPy · Pandas · SciPy*

- Computed implied volatility for SPY options using Black-Scholes and Brent's method, then fitted a cubic-spline fair-value curve to the volatility smile to flag options that look cheap or expensive versus their neighbors.
- Turned the signal into a mean-reversion strategy (long/short butterflies when the IV-spread z-score exceeds 1.5σ), backtested on 2017–2018 data; a standard relative-value approach in options trading.

COMPETITIONS & ACHIEVEMENTS

- QuantInsti EPAT Batch 68: Top scorer, recognized at Convocation 2026.
- Susquehanna Australia & NZ Poker Showdown (Jul 2025): Top 30 of 100 finalists, from 1,000+ qualifiers.
- SIG UNSW Algothon (2025): 18th of 400+ (solo) | IMC Prosperity 4 (2026): #284 in Australia after Round 2 (solo).

EDUCATION

Master of Science in Financial Engineering, WorldQuant University (online, in progress) *Started Nov 2026*

QuantInsti, Executive Program in Algorithmic Trading (EPAT) *Mar 2026*

University of Wollongong, Bachelor of Computer Science (AI & Big Data) *Dec 2025*

University of Wollongong, Diploma of Information Technology *Dec 2023*

SKILLS

Product: Agile/Scrum, PRDs, roadmapping, user research, stakeholder management. **Technical:** Python, SQL, Git, data analysis, 150+ LeetCode problems (Java, Python).
